

- 1、 Launch Remote Desktop Connection, click **Show Options**.

- 2、 Switch to **Display** tab, check **Use all my monitors for the remote session** to extend your desktop to all monitors in RDP session.

- 3、 Switch to **Local Resources** tab, click **Settings** on **Remote audio**.

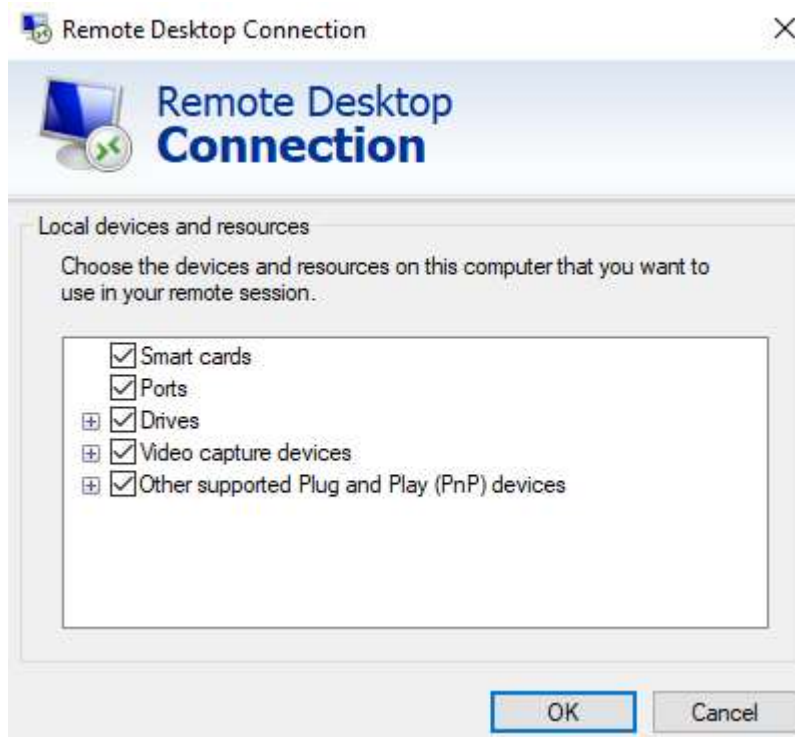

- 4、 Select **Play on this computer** and **Record from this computer**. It's very important, these settings allow you to map remote audio and video to your local machine. So that you can receive teams videos and calls on your local machine.

- 5、 Back to **Local Resources** tab, click **More** on **Local devices and resources**.

- 6、 Check all the resources to map your local hardware resource to remote VDI machine. You can easily share local files or extend local devices to VDI with these settings.

7、 All settings done, please start and use your VDI machine.
