

- 1、 Launch Remote Desktop Connection, click Show Options.

- 2、 Switch to Display tab, check Use all my monitors for the remote session to extend your desktop to all monitors in RDP session.

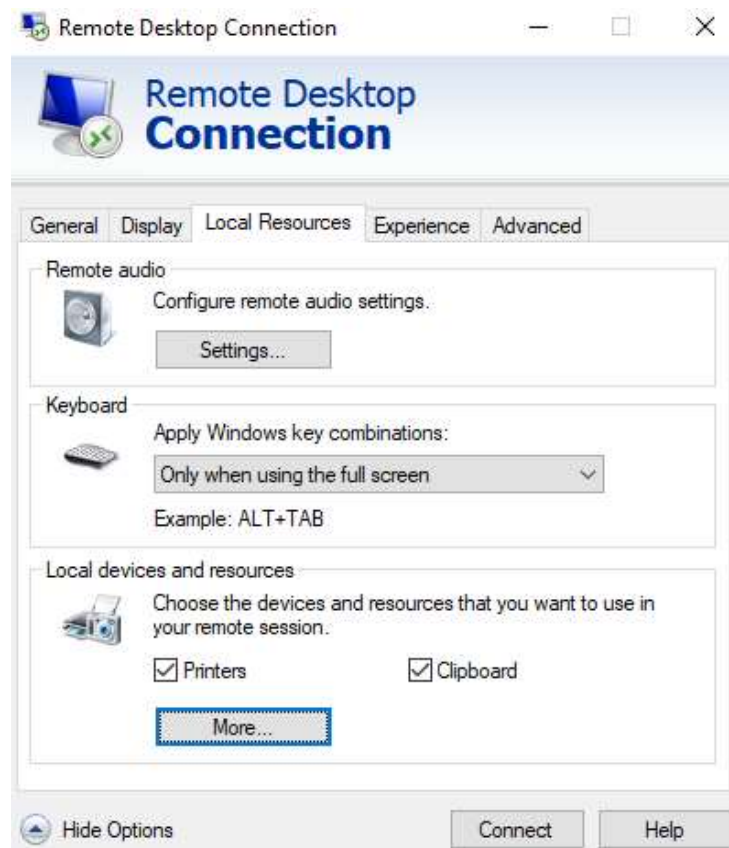

3、 Switch to Local Resources tab, click Settings on Remote audio.

4、 Select Play on this computer and Record from this computer. It's very important, these settings allow you to map remote audio and video to your local machine. So that you can receive teams videos and calls on your local machine.

- 5、 Back to Local Resources tab, click More on Local devices and resources.

- 6、 Check all the resources to map your local hardware resource to remote VDI machine. You can easily share local files or extend local devices to VDI with these settings.

7、 All settings done, please start and use your VDI machine
